RGB

RGB LED Light Kit

The RGB LED Light Kit consists of a 24V Red, Green and Blue LED light controller, a 42 Channel Remote Control and a 5 metre strip of adhesive RGB LED lights.

The light controller has eight pre-programmed colours and the option of over 1000 colour variations. It can be programmed to display a cycle of light colours with any combination of colour, light intensity, frequency and rotation (up to 28 seconds). It has three manual input push buttons and three outputs each capable of controlling six RGB LED lights.

Indoors or Outdoors

The RGB LED lighting trend originated in Europe and is used to create stunning effects in restaurants, bars, night clubs and cafes. The kit offers an economical and energy efficient way to add atmospheric lighting features and effects both indoors and out.

Create garden highlights by lighting pools, water features, walls, paths, gates, trees and garden beds. Indoors, create atmosphere and mood lighting in a home theatre room, bar room or a feature bathroom or bedroom. Create a dynamic indoor feature wall or a funky party atmosphere at your next BBQ.

What is in the RGB Kit

Atmosphere Lighting

Create stunning effects in outdoor entertainment areas like patio roofs.
